* Effective with this report, and pursuant to new regulatory requirements, the Bloomberg U.S. Aggregate Bond Index replaced the Bloomberg Intermediate Government Bond Index as the Fund's primary benchmark to represent a broad-based securities market index. The Fund continues to use the Bloomberg Intermediate Government Bond Index as an additional benchmark.

What did the Fund invest in?

The Fund exclusively invested in U.S. government securities, focusing on high current income relative to market yields. The tables reflect the investment makeup of the Fund as of September 30, 2024. Portfolio holdings are subject to change.

Fund Statistics (as of 09/30/24)		Estimated Average Life	
Total Net Assets	\$227,989,425	0-1 Year	1.2%
# of Portfolio Holdings	188	1-5 Years	93.4
Portfolio Turnover Rate	11.64%	5-10 Years	4.3

Average Maturity	23.9 Years	Total	100.0%
Effective Duration ¹	3.6 Years		

¹ Duration is a measure of estimated price sensitivity relative to changes in interest rates. Portfolios with longer durations are typically more sensitive to changes in interest rates. For example, if interest rates rise by 1%, the fair value of a security with an effective duration of 5 years would decrease by 5%, with all other factors being constant. The correlation between duration and price sensitivity is greater for securities rated investment-grade than it is for securities rated below investment-grade. Duration estimates are based on assumptions by Sit Investment Associates, Inc. (the "Adviser") and are subject to a number of limitations. Effective duration is calculated based on historical price changes of securities held by the Fund, and therefore is a more accurate estimate of price sensitivity provided interest rates remain within their historical range.

The table represents the Adviser's estimates of the dollar weighted average life of the portfolio's securities, which differ from their stated maturities.
